

ABOUT ME

My journey into engineering began with a childhood fascination ignited by a TV documentary on manufacturing processes. Now armed with bachelor's and master's degrees, I've cultivated design, data analysis, process enhancement, and coding expertise. Along the way, I've thrived in roles centered on quality, continuous improvement, and supply chain management, resulting in tangible efficiency improvements and financial savings. My commitment to innovation and optimizing manufacturing procedures is unwavering, underscored by certifications in supply chain analytics and Lean Six Sigma. I'm on the lookout for opportunities to make a significant impact on an organization's prosperity.

Two truths and a lie

I am deeply drawn to the serenity and beauty of nature. Whether it's the majestic mountains, the tranquil forests, or the rhythmic waves of the sea, I find solace in the harmonious symphony of colors and sounds that renew my spirit.

Equally captivating are the architectural wonders of cities. From historical landmarks steeped in narratives of the past to contemporary masterpieces pushing the boundaries of design, I am entranced by the stories etched in stone and steel.

Adrenaline junkie
